Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

WPI; 2003-328651/31. P-PSDB; ABU08094.

New tyrosine biosynthetic enzyme, chorismate dismutase, proteins and nucleic acids, useful for facilitating design and/or identifying inhibitors of those enzymes that may be used as herbicides and for producing antibodies.

Claim 3; Page 22; 32pp; English.

Arabidops

The invention discloses isolated polynucleotides encoding chorismate

                                                                                                                                                                                                                                               à
  converted to anthranilate amino acids must be included in the diets of animals. In the arcmatic amino acid biosynthetic pathway chorismate is converted to anthranilate during tryptoplan biosynthesis and is converted to prephenate, the branch point for tyrosine and phenylalanine biosynthesis. Chorismate mutase catalyses the conversion of chorismate to prephenate. Also disclosed are methods for selecting an isolated polymucleotide that affects the level of expression of a tyrosine plyspetide in a host cell, obtaining a mucleic acid fragment encoding a tyrosine biosynthetic enzyme polypeptide and evaluating compounds for their ability to inhibit the activity of a tyrosine biosynthetic enzyme plypeptides can be used produce antibodies. Chorismate mutase and prephenate dehydrogenase are good targets for herbicides that will not affect animals, and overexpression of these enzymes may be used to increase the content of aromatic amino acid in food crops. The polypeptides may also be used to design and/or identify inhibitors of those enzymes that may be used to design and/or incline acids may be used to create transgenic plants, as probes for the genetic and physical mapping of the genes and as markers for traits linked to those genes. The sequence presented is a soybean chorismate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 360

Soybean, plant, gene, ss, chorismate mutase, expressed sequence tag, EST, aromatic amino acid, diet, biosynthesis, chorismate, anthranilate, tryptophan, prephenate, tyrosine, phenylalanine, prephenate dehydrogenase, herbicide, food crop. The invention discloses isolated polynucleotides encoding chorismate mutase polypeptides. Aromatic amino acids must be included in the diets New tyrosine biosynthetic enzyme, chorismate dismutase, proteins ar nucleic acids, useful for facilitating design and/or identifying inhibitors of those enzymes that may be used as herbicides and for

```
of animals. In the aromatic amino acid biosynthetic pathway chorismate is converted to anthranilate during tryptophan biosynthesis and is converted to prephenate, the branch point for tyrosine and phenylalanine biosynthesis. Chorismate mutase catalyses the conversion of chorismate to prephenate. Also disclosed are methods for selecting an isolated polymucleotide that affects the level of expression of a tyrosine biosynthetic enzyme polypeptide in a host cell, obtaining a nucleic acid fragment encoding a tyrosine biosynthetic enzyme polypeptide and ryrosine biosynthetic enzyme. The polypeptides can be used produce antibodies. Chorismate mutase and prephenate dehydrogenase are good a tyrosine biosynthetic enzyme. The polypeptides can be used produce antibodies. Chorismate mutase and prephenate dehydrogenase are good these enzymes may be used to increase the content of aromatic amino of these enzymes may be used to increase the content of aromatic amino acid in food crops. The polypeptides may also be used as herbicides. The nucleic acids may be used to create transgenic plants, as probes for the genetic and physical mapping of the genes and as markers for traits matter animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            to those genes. DNA.

mutase-2

A. thaliana cytosolic chorismate

This invention describes a novel method for the preparation of fine chemicals by culturing organisms in which the shithmate pathway has been altered relative to the wild type. The method involves a construct containing a plastid transit peptide, a chorismate mutage and/or transcription or translation in plants. The method is used to produce chemicals, particularly Vitamins E or K and/or ubiquinone, useful e.g. also aromatic amino acids, salicylic or folic acid derivatives, but also aromatic amino acids, salicylic or folic acid derivatives, but plants with increased Vitamin E contents have improved resistance to plants with increased Vitamin E contents have improved resistance to abiotic stress, e.g. frost and drought. Transgenic plants Also plants with increased Vitamin E contents have improved resistance to shikimate pathway are useful as foods, fodder and in preparation of processed foodstuffs. Transgenic plants with modified shikimate pathways are useful as goods, fodder and in preparation of processed content of desired chemicals, particularly tocopherols and/or tocotrienols. This sequence encodes the Arabidopsis thaliana cytosolic chorismate mutase-2 protein used in the method of the invention Shikimate pathway, chorismate mutase, gene, prephenate dehydrogenase, vitamin E, vitamin K, ubiquinone, fat-soluble antioxidant, transgenic, feed, pharmaceutical, cosmetic; aromatic amino acid; salicylic acid; folic acid; phenylpropacid; flavanoid; plant; abiotic stress resistance; tocopherol; tocotrieol; ds. Preparing fine chemicals, particularly Vitamins B and K, useful as antioxidants e.g. in foods or medicine, by growing organisms with altered Location/Qualifiers 64. 861 /\*tag= a /product= "chorismate mutase-2" Sommer S; Disclosure; Page 57-60; 74pp; German. antioxidants e.g. in foods or m shikimate biosynthesis pathway. The present sequence is that of an antisense oligonucleotide that is specific for Arabidopsis thaliana chorismate-mutase-2 (CM) mRNA. CM catalyses the conversion of chorismate to prephenate in a branch of the shiximate pathway leading to phenylalanine and tyrosine biosynthesis. It is essential for plant growth, inhibition of CM gene expression in plant seedlings results in severe chlorosis, redeiced growth and developmental abnormalities. The invention provides compositions for the modulation of plant growth or development using CM antisense and sense polynucleotides, double-stranded RNA and ribozymes, and related expression cassettes and vectors. The compositions are particularly useful for the modulation and inhibition of plant growth, and for generating male sterile plants or plants that produce seedless fruit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           141

Identifying compounds useful for modulating and inhibiting plant growth and development, by using chorismate synthase and chorismate mutase as targets which are essential for plant growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Grirchacticalicites of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       crcrcccrariccarchacagahanahagararhahagagahccarrccrrccrcrcc

CM is essential for plant growth; inhibition of CM gene expression in plant seedlings results in severe chloroxies, reduced growth and development and abnormalities. The invention provides compositions for the modulation of plant growth or development using CM antisense (see ABA31400) and sense polymucleotides, double-stranded RM antisense, and related expression cassettes and vectors. The compositions are particularly useful for the modulation and inhibition of plant growth, and for is also a target for the identification of herbicides and methods are provided for using CM in the identification of herbicide and methods are provided for using CM in the identification of herbicide and methods are phentods are also provided for identifying compounds that simulate the expression or function of CM. These can be used to promote growth and

This invention describes a novel method for the preparation of fine enhericals by culturing organisms in which the shikinate pathway has been altered relative to the wild type. The method involves a construct containing a plastid transit peptide, a chorismate mutase and/or prephenate dehydrogense, linked to at least one regulatory sequence for transcription or translation in plants. The method is used to produce chemicals, particularly Vitamins B or K and/or ubiquinone, useful e.g. as alta-soluble antioxidants (in feeds, pharmaccuticals and cosmetics), but phenylpropanoids, flavanoids etc., especially in transgenic plants. Also plants with increased Vitamin B contents have improved resistance to abiotic stress, e.g. frost and drought. Transgenic plants with an altered shikimate pathway are useful as foods, fodder and in preparation of

                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                         장 유
                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising: (a) contacting nucleic acid representative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome; and (b) detecting a profile of expressed polynucleotides in the plant cell characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing production of transgenic plants, cells and seeds and in producing with increased tolerance to ablotic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  501
                                                                                                                                                                                                                                                                                                                                                            Identifying a stress condition to which a plant cell has been exposed and producing plants with increased tolerance to these abiotic stresses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           141

Rice chorismate mutase cDNA

22-MAY-2003

/\*tag= a /product= "Chorismate mutase" 'note= "No start codon shown"

'partial

Location/Qualifiers 253. .1026

Oryza sativa

Key

```
have increased content of desired chemicals, particularly tocopherols and/or tocotrienols. This sequence encodes the construct pCR-Script/AtCM-ITP-ATCM-2 which is composed of the Arabidopsis thaliana plastid chorismate mutase-1 transit poptide and a Arabidopsis thaliana chorismate mutase-2 fragment and is used for plastid localisation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             735
                                                                                                                                                                                                                                260
                                                                                                                                                                                                                                                                                             320
